

Please do not give in to pressures to stop XM broadcasts of traffic and weather. I live in Nashville, and currently i am not even serviced by this product from XM. However, you have no right to tell a company that is operating from a non-terrestrial location what they can and cannot broadcast. If i choose to PAY for a product, as long as that product is not A: Stealing goods or services from the NAB or B: keeping the NAB from operating, what right do you have to cancel it on behalf of a Lobbyist's wishes? If this were a free service that was competing for advertising dollars in an area, maybe they would have a point. WE PAY FOR XM. NAB gets their services HANDED to them by the FCC, and have no right to dictate what others in another business model entirely can with customers that PAY for their services.
